I-CAR Training at the Skills Canada National Competition

All teachers and industry stakeholders are welcome.

VEHICLE TECHNOLOGY AND TRENDS 2016

This course provides an overview of manufacturing trends - such as the aluminum-intensive vehicles coming to market that will require aluminum repair skills - and a glimpse into what is new and what to expect in the near future.

Detailed information on new equipment, materials, and procedures will be provided, including driver safety innovations such as rearview cameras and active lane keeping systems.

The course concludes with an overview of some of the new technology that is being introduced in a variety of vehicles such as the Ford Skyliner Transit, CAFE Solution Search, Multi-State EV and Fuel Cell Plan, Roof-Mounted Front Passenger Airbag, and Audi Traffic Light Recognition.

Attendees will receive an I-CAR credit for successful completion of the course.
